Jayden Kalberer

kalbererj@spu.edu • (206) 963-2637 • Everett, WA • linkedin.com/in/jayden-kalberer • kalbejay000.github.io

Professional Summary: Electrical Engineering student with experience in C++, Python, MicroPython, and power system analysis, backed by a work history in inventory management and workflow optimization. Proven ability to maintain inventory accuracy and communicate process improvements to management. Known for strong problem-solving, teamwork, and attention to detail.

EDUCATION

Seattle Pacific University, Seattle, WA Expected June 2027
Bachelor of Science (B.S.) in Electrical Engineering

WORK EXPERIENCE

Washington Movers, Seattle, WA July 2026 – Present
Mover

- Collaborated with team members to safely and efficiently transport customers' items
- Communicated regularly with customers to ensure their needs were met and the job met expectations
- Applied critical thinking to resolve problems that arose throughout the workday

A Northeast Cleaners, Seattle, WA November 2023 – July 2026
Order Fulfillment Associate

- Processed customer orders accurately to maintain efficient workflow and meet service expectations
- Maintained inventory accuracy through regular stock checks and effective record-keeping
- Communicated workflow challenges and potential process improvements to management

Culaccino Pizzaria, Everett, WA August 2019 – November 2023
Cook

- Maintained cleanliness and organization of workstations to meet health and safety standards
- Collaborated with team members during service to ensure timely food delivery to customers
- Assisted with inventory management by tracking supplies and reporting shortages; adapted quickly to new tasks during busy periods

PROJECTS

Gravity Lamp, Junior Design, Seattle Pacific University March 2026 – June 2026
Power Generation & Storage and Lighting Subsystems Lead | Team of four

- Collaborated with three engineering students to design a portable light recharged by gravitational energy
- Developed the power generation and storage subsystem by sourcing a generator and testing it under a simulated load to determine the optimal RPM for the voltage and current needed to charge the selected battery
- Designed a lighting circuit producing at least 400 lumens alongside the system's other electrical components

DC Power Supply, Electronics 1, Seattle Pacific University March 2026 – June 2026
Individual Project

- Built a DC power supply with three fixed and three adjustable outputs from a 10:1 center-tapped transformer on 120 V AC
- Rectified the 12 V AC transformer output with a diode bridge to create positive and negative rails feeding five voltage regulators, with an op-amp powered by the ±12 V regulators supplying an isolated output
- Added potentiometers to adjust the two adjustable regulators and the op-amp output; used Altium and LTspice to simulate the circuit and design the PCB

4th-Order Sallen-Key Bandpass Filter (25 kHz), Seattle Pacific University January 2026 – March 2026
Individual Project

- Designed a two-stage filter centered at 25 kHz (stage Q values of 3.5 and 4.0) with a total gain of 4.28 V/V
- Built in a peak detector and comparator that turns on an LED when the correct input frequency is present
- Developed the design in LTspice and verified the physical circuit's frequency response with an oscilloscope FRA

SKILLS

Certificate: SOLIDWORKS Electrical Design Associate
Programming: C++, Python, MicroPython
Technical: Mathematics, power system analysis, circuit design, PCB design (Altium Designer), simulation (LTspice)
Professional: Inventory management, workflow optimization, teamwork, communication
